

How to push a machine into a domain

1. Start Menu/Control Panel/Performance and Maintenance/System
2. Computer Name tab
3. Change
4. Choose domain
5. Enter domain name e.g. trenholm, student, etc.
6. *Enter username and password
7. You should get a welcome screen
8. Click ok
9. Click ok to restart the computer

* If it is the user's first logon into the domain, the username is the first letter of the first name + last name (e.g. rmcwilliams). The default password is "password" and must be changed.
